

PUBLIC AWARENESS SEMINAR SERIES

Falls from height are one of the biggest causes of workplace fatalities and major injuries. Common causes are falls from ladders and through fragile roofs.

Work at height means work in any place where, if there were no precautions in place, a person could fall a distance liable to cause personal injury. For example you are working at height if you:

- are working on a ladder or a flat roof;
- could fall through a fragile surface;
- could fall into an opening in a floor or a hole in the ground.

Take a sensible approach when considering precautions for work at height. There may be some low-risk situations where common sense tells you no particular precautions are necessary and the law recognises this. There is a common misconception that ladders and stepladders are banned, but this is not the case. There are many situations where a ladder is the most suitable equipment for working at height.

Join the Seminar for better understanding:-

- ✓ Impacts of working at height.
- ✓ Advice for incorrect protection or equipment choices
- ✓ How can manual materials handling be prevented

Target Audiences:

- OHS Professionals
- Plant Manager, Heads of Organizations
- Line Manager in production, construction, maintenance, warehousing, laboratory etc. in all industries
- Project Manager
